FOAM. This acronym has been used for over 75 years at Rensselaer to designate an upper-division course entitled, Foundations of Applied Mathematics. This course was started by

Download Free Applied

George Handelman in 1956, when he came to Rensselaer from the Carnegie Institute of Technology. His objective was to closely integrate mathematical and physical reasoning, and in the process enable students to obtain a qualitative understanding of the world we live in.

Download Free Applied

FOAM was soon taken over by a young faculty member, Lee Segel. About this time a similar course, Introduction to Applied Mathematics, was introduced by Chia-Ch'iao Lin at the Massachusetts Institute of Technology. Together Lin and Segel, with help from Handelman,

produced one of the landmark textbooks in applied mathematics, *Mathematics Applied to - terministic Problems in the Natural Sciences*.

This was originally published in 1974, and republished in 1988 by the Society for Industrial and Applied Mathematics, in their *Classics*

are combined in a unified way with classical theory of linear operators.

Several new topics, including wavelength analysis, multigrid methods, and homogenization theory, are blended into this mix to amplify this theme. This book is ideal as a survey course for graduate
