Business Planning and Control System (BPCS) is a popular system of application programs for manufacturing and other industries that is developed and sold by Systems Software Associates (SSA). SSA reports that BPCS is installed at over 8,000 business sites worldwide. The BPCS applications are divided into:

### ~~What is Business Planning and Control System (BPCS ...~~

At Reinforce Technology we tailor our training programmes to the specific needs of the client whether it is one-on-one or a classroom of twenty. By carrying out a training needs analysis we identify areas of weakness, help document processes and provide training manuals that are bespoke to individual customers. .

Increased automation reduces the potential for operator error, but introduces the possibility of new types of errors in design and maintenance. This book provides designers and operators of chemical process facilities with a general philosophy and approach to safe automation, including independent layers of safety.

Loss prevention engineering describes all activities intended to help organizations in any industry to prevent loss, whether it be through injury, fire, explosion, toxic release, natural disaster, terrorism or other security threats. Compared to process safety, which only focusses on preventing loss in the process industry, this is a much broader field. Here is the only one-stop source for loss prevention principles, policies, practices, programs and methodology presented from an engineering vantage point. As such, this handbook discusses the engineering needs for manufacturing, construction, mining, defense, health care, transportation and quantification, covering the topics to a depth that allows for their functional use while providing additional references should more information be required. The reference nature of the book allows any engineers or other professionals in charge of safety concerns to find the information needed to complete their analysis, project, process, or design.

This book explains the decision-making processes for the management of instrumented protective systems (IPS) throughout a project's life cycle. It uses the new IEC 61511 standard as a basis for the work processes used to achieve safe and reliable process operation. By walking the reader through a project's life cycle, engineering, maintenance, and operations, the information allows users to easily focus on their responsibilities and duties. Using this approach, the book is useful as a primer, guidelines reference, and resource manual. Examples provide the added "real-world" experience applications.

Batch reaction systems pose unique challenges to process safety managers because they do not operate in a steady state. The sequence of processing steps, and frequent start-ups and shutdowns, increase the possibility of human errors and equipment failures. And, since batch plants are often designed for shared use, frequent modification of piping and layout may occur, resulting in complex "management of change" issues. This book identifies the singular concerns of batch reaction systems—including potential sources of unsafe conditions—and provides a "how-to" guide for the practicing engineer in dealing with them by applying appropriate practices to prevent accidents.

A Guide to Hazard Identification Methods, Second Edition provides a description and examples of the most common techniques leading to a safer and more reliable chemical process industry. This new edition revises previous sections with up-to-date, linked sources. Furthermore, new elements include a more detailed account of purpose, Black Swan events, human factors, auditing and QA, more examples and a discussion of major incidents, HAZID and task analysis.
