The automobile seems to be as popular now as it ever was. Posters of cars still adorn many a child's bedroom wall, and school exercise books are full of doodles of cars. This book takes those notebook sketches and teaches you how to develop them into the car designs you see in magazines. Using simple to follow step-by-step drawings it guides you from pencil sketch to marker rendering, from doodle to highly visual computer generated artwork. Adrian Dewey has worked on designs as diverse as small sports cars to double decker buses, modified motors to concept Formula 1 cars, using various techniques and styles. In this book, he uses his knowledge of the different styles to guide the reader in creating great artwork and designs of their own. The book shows in detail how to use different materials and how to get the most out of each one, whether it be a great pencil sketch or a photo realistic vector illustration. The book also features an easy to follow index for quick reference on different types of drawing.

This book is a trip down memory lane, recalling the days when Formula 5000 cars roared around the race tracks in Britain and Europe, creating a lot of noise and, occasionally, dust. The wail of a 5-litre engine was often more spine-tingling than ANY other racing car! Nowadays, many of the same cars show modern day spectators just what Formula 5000 was, back in the day. Few, if any, of the drivers are prima-donnas and many want to know what their car did before it came into their possession. This book answers those questions and many more.
