Every day thousands of people are killed and injured on our roads. Millions of people each year will spend long weeks in the hospital after severe crashes and many will never be able to live, work or play as they used to do. Current efforts to address road safety are minimal in comparison to this growing human suffering. This report presents a comprehensive overview of what is known about the magnitude, risk factors and impact of road traffic injuries, and about ways to prevent and lessen the impact of road crashes. Over 100 experts, from all continents and different sectors -- including transport, engineering, health, police, education and civil society -- have worked to produce the report. Charts and tables.

Over the last decade, the theory that poverty in the world's poorest regions could be alleviated by providing small loans to micro-entrepreneurs has become increasingly popular. This volume examines the effectiveness of this theory when put into practice. The book presents empirical evidence drawn from comparative experiences in seven developing countries and produces some startling conclusions. This work should be essential reading for all those interested in development, poverty-reduction, social welfare and finance. Volume One provides a detailed analysis of this theory and offers policy recommendations for practitioners in the field.

At their best park, recreation, and tourism organisations can change the world for the better. They can be powerful forces for community revitalisation, environmental and historical education, fitness, connectedness with nature, and much more. But this great potential can only be realised by strong, effective organisations. High Performance Agencies is about the skills and approaches that can lead these organisations to reach their full potential, grow, thrive, and in the process make their communities better places. Because of the technological, demographical, economical, and political changes in society, the old ways of organisational management need to be retooled for the more dynamic environment. This book is written to be used as both a university text for management and administration of park, recreation, and tourism organisations, as well as a guide for practitioners in the field.

The automotive industry is one of the most environmental aware manufacturing sectors. Product take-back regulations influence design of the vehicles, production technologies but also the configuration of automotive reverse supply chains. The business practice comes every year closer to the closed loop supply chain concept which completely reuses, remanufactures and recycles all materials. The book covers the emerging environmental issues in automotive industry through the whole product life cycle. Its focus is placed on a multidisciplinary approach. It presents viewpoints of academic and industry personnel on the challenges for implementation of sustainable police in the automotive sector
