For example: rocks and sand, and a salad with lettuce, tomatoes, and croutons. Another type of Page 10/39

mixture is called a "solution;" this is where a solid, like salt, dissolves into a liquid, like water. As you can imagine, it is easier to take apart a mixture like the rocks and sand versus the salt and water. This month's experiment is more of a challenge Page 11/39

to see if you are able to think of ways to separate several different mixtures.

(Solicit answers like: salt water, mud pies, bubbles, etc.) Solutions are types of mixtures, but mixtures can also be heterogeneous, where you can see the different ingredients separated out. Refer to the Page 21/39

associated activity Messin' with Mixtures for students to further their understanding by investigating a heterogeneous mixture as environmental engineers analyzing a soil sample, using trail mix.

Properties of Mixtures vs. Solutions: Mix It Up! - Lesson ... What is the difference between a solution and a mixture? In chemistry a solution is actually a type of mixture. A solution is a mixture that is the same or uniform throughout. Think of the Page 23/39

example of salt water. This is also called a "homogenous mixture." A mixture that is not a solution is not uniform throughout. Think of the example of sand in water.
