The reason Peterbilt uses a relay is

Online Library Peterbilt Engine Fan Relay

because Peter uses the "Power to energise" fan strategy. Which means it should take power to energise the fan solenoid. However, Cat's fan strategy is "Power out is fan off". Take a look at this schematic. I would follow the wires from the fan control solenoid and it should lead you to the relay. The relay is normally inside the frame rail.

solenoid to turn the fan on. So Pete installs a normally closed relay to the fan control valve. This way when the ECM send out power, it opens the relay. The relay is normally located on the fire wall of the truck.

I have a 2000 model pete 379 the engine fan runs all the ...

The reason I ask is because if it take power to engage the fan, the truck will have a fan relay that pin 11 connects to. It's a normally closed relay and when pin 11 is sending power, it opens it. If you have this set up, I would suspect the relay that feeds the fan solenoid is faulty. I see this a lot on Peterbilts.

I got an 01 peterbilt that won't engage the fan hub with ...

TruckersReport.com ...

The cooling fan relay is the relay that controls the engine's cooling fans. When the correct parameters are met, a temperature switch or the computer will activate the relay, which will allow power to the fans. The relay will usually be activated once it is detected that the vehicle's temperature approaches excessively high temperatures.

Thanks for the information.It sounds like
your fan control relay is sticking. Peter bilt

Online Library Peterbilt Engine Fan Relay

uses a relay to control the fan. The engine ecm decides to engage the fan but when the ecm decides to cut the fan off, the relay sticks and stays on. When you remove the fuse, the relay loses all power and cuts off. Please let me know if you need more help or have more questions.

1997 Peterbilt with CAT 3406. Engine Fan stays on and won ...

The function of the cooling fan relay is to convert a low voltage signal from either the electronic control module (ECM) or a thermostatically controlled sensor. The cooling fan relay takes the low voltage signal and internally switches the relay to allow battery voltage to be supplied to the radiator cooling fan.
