state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Åström and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID control, frequency domain design, and robustness. Features a new chapter on design principles and tools, illustrating the types of problems

There have always been homeless people in the United States, but their plight has only recently stirred widespread public reaction and concern. Part of this new recognition stems from the problem's prevalence: the number of homeless individuals, while hard to pin down exactly, is rising. In light of this, Congress asked the Institute of Medicine to find out whether existing health care programs were ignoring the homeless or

delivering care to them inefficiently. This book is the report prepared by a committee of experts who examined these problems through visits to city slums and impoverished rural areas, and through an analysis of papers written by leading scholars in the field.

Most land in the United States is in rural areas, as are the sources of most of its fresh water and almost all its other natural resources. One of the first books to approach resource economics and rural studies as fundamentally interconnected areas of study, *Frontiers in Resource and Rural Economics*

integrates the work of 18 leading scholars in resource economics, rural economics, rural sociology and political science in order to focus on two complex interdependencies—one pertaining to natural resources and human welfare, the other to urban and rural communities and their economies. The book reviews the past 50 years of scholarship in both natural resource and rural economics. It contrasts their different intellectual and practical approaches and considers how they might be refocused in light of pressing demands on human and natural systems. It then proposes a 'new rural economics' that

acknowledges the full range of human-ecosystem and urban-rural interdependencies. It explores the relationship between natural resources and economic growth, and considers the prospects for amenity-driven growth that would benefit both new and traditional inhabitants of rural areas. Later chapters explore the politics of place, spatial economics, strategies for reducing rural poverty, and prospects for linking rural and environmental governance. Throughout, the book emphasizes innovative research methods that integrate natural resource, environmental, and rural economics.
