Evidence-Based Imaging is a user-friendly guide to the evidence-based science and merit defining the appropriate use of medical imaging in both adult and pediatric patients. Chapters are divided into major areas of medical imaging and cover the most prevalent diseases in developed countries, including the four major causes of mortality and morbidity: injury, coronary artery disease, cancer, and cerebrovascular disease. This book gives the reader a clinically-relevant overview of evidence-based imaging, with topics including epidemiology, patient selection, imaging strategies, test performance, cost-effectiveness, radiation safety and applicability. Each chapter is framed around important and provocative clinical questions relevant to the daily physician's practice. Key points and summarized answers are highlighted so the busy clinician can quickly understand the most important evidence-based imaging data. A wealth of illustrations and summary tables reinforces the key evidence. This revised, softcover edition adds ten new chapters to the material from the original, hardcover edition, covering radiation risk in medical imaging, the economic and regulatory impact of evidence-based imaging in the new healthcare reform environment in the United States, and new topics on common disorders. By offering a clear understanding of the

science behind the evidence, Evidence-Based Imaging fills a void for radiologists, family practitioners, pediatricians, surgeons, residents, and others with an interest in medical imaging and a desire to implement an evidence-based approach to optimize quality in patient care.

Have you ever wanted to calculate the predicted peak flow for one of your asthmatic patients without spending valuable minutes searching for that confounded little slide rule gizmo? Wouldn't it be great if you could somehow remember all Mrs. Jones' medications when the nursing home calls to see if it's OK to treat her acutely elevated blood pressure with some atenolol? Handheld computers are emerging as the stethoscopes of the twenty-first century, and no clinician should be without this essential tool. These small, easy-to-use devices are now powerful enough to help clinicians manage information and make medical decisions at the point of care. This comprehensive how-to guide targets all levels of handheld computer users, from novices to experts, and demonstrates how to make the most of handheld computers in any medical practice. Designed with easy-to-understand, hands-on exercises for each new skill presented, this book begins with choosing a handheld and "getting to know" your new device. It then progresses through downloading and installing software, using charge capture and e-prescription programs, Internet and evidence-based resources for your device, designing and programming your own programs, and going wireless. Written by three experienced family medicine clinicians, Handhelds in Medicine is designed to improve every day practice for any busy health professional. There are chapters written for and by nearly every health professional, including nurses, physician assistants and speech pathologists. Reviews of handheld devices and websites will be kept current at www.handheldsinmedicine.com

Thousands of business books are published every year— Here are the best of the best After years of reading, evaluating, and selling business books, Jack Covert and Todd Sattersten are among the most respected experts on the category. Now they have chosen and reviewed the one hundred best business titles of all time—the ones that deliver the biggest payoff for today’s busy readers. The 100 Best Business Books of All Time puts each book in context so that readers can quickly find solutions to the problems they face, such as how best to spend The First 90 Days in a new job or how to take their company from Good to Great. Many of the choices are surprising—you’ll find reviews of Moneyball and Orbiting the Giant Hairball, but not Jack Welch’s memoir. At the end of each review, Jack and Todd direct readers to other books both inside and outside The 100 Best. And sprinkled throughout are sidebars taking the reader beyond business books, suggesting movies, novels, and even children’s books that offer equally relevant insights. This guide will appeal to anyone, from entry-level to CEO, who wants to cut through the clutter and discover the brilliant books that are truly worth their investment of time and money.

The Handbook of Incarceration in Popular Culture will be an essential reference point, providing international coverage and thematic richness. The chapters examine the real and imagined spaces of the prison and, perhaps more importantly, dwell in the uncertain space between them. The modern fixation with ‘seeing inside’ prison from the outside has

prompted a proliferation of media visions of incarceration, from high-minded and worthy to voyeuristic and unrealistic. In this handbook, the editors bring together a huge breadth of disparate issues including women in prison, the view from 'inside', prisons as a source of entertainment, the real worlds of prison, and issues of race and gender. The handbook will inform students and lecturers of media, film, popular culture, gender, and cultural studies, as well as scholars of criminology and justice.

The book also includes selected case studies that add to the reading and comprehension value of the concepts presented, ensuring a blend of theory and practical case studies to help readers better comprehend the principle of sustainability and its application.

Confronted with a myriad of T's, N's and M's in the VICC TNM booklet, classifying a malignancy may seem to many cancer clinicians a tedious, dull and pedantic task. But at a closer look at the TNM Atlas all of a sudden lifeless categories become vivid images, challenging the clinician's know-how and investigational skills. Brigit van der Werf-Messing, M.D. Professor of Radiology Past Chairman of the International TNM-Committee of the VICC Rotterdam, July 1982 Preface

In 1938 the League of Nations Health Organization published an Atlas Illustrating the Division of Cancer of the Uterine Cervix into Four Stages (J. Heyman, ed., Stockholm). Since this work appeared, the idea of visual representation of the anatomical extent of malignant tumours at the different stages of their development has been repeatedly discussed. At its meeting in Copenhagen in July 1954, the DICC adopted as part of its programme "the realization of a clinical atlas". However, the time to do the planned book of illustrations was not ripe until the national committees and international organizations had officially recognized the 28 classifications of malignant tumours at various sites as presented in the third edition of the TNM Booklet edited by M. Harmer (TNM Classification of Malignant Tumours, 1978). This was all the
